AGE 24

GENDER MALE

OCCUPATION PROJECT MANAGER

TECH LITERATE
Highly Proficient

"I have good items sitting in my closet, but if figuring out the price and listing them takes more than five minutes, I'd rather just donate them and be done with it."

Bio

Mark is a busy professional living in a suburban area. He frequently upgrades his technology and sports gear, which means he accumulates high-value items that he no longer uses. He values his free time on weekends significantly more than squeezing every last potential dollar out of his used belongings.
He is highly comfortable with digital tools, mobile apps, and instant transactions. However, he has zero patience for tedious data entry, researching market values across multiple websites, or dealing with flaky buyers on local online marketplaces. He is open to using AI if it completely eliminates the friction of selling and provides an immediate, trustworthy solution.

Core needs

An ultra-fast, zero-friction way to offload valuable items without writing descriptions.
Immediate, accurate pricing estimates based on just a quick smartphone photo.
A direct, guaranteed "Cash-Out" payment option to avoid waiting for individual buyers.
Clear, scannable proof of how the app calculated the item's value to ensure he isn't being drastically underpaid.

Frustrations

- Traditional selling platforms require too much time and cognitive load to manage listings.
- Deeply annoyed by low-ball offers, haggling, and confrontational negotiations with strangers online.
- Hesitant to accept automated offers if the system feels like a "black box" that hides its data sources.
- Experiences guilt over hoarding unused items but remains paralyzed by the manual effort required to sell them.
